

National Fire Sprinkler Association Job Description – Engineering Department Intern

To work within the Engineering Department of the National Fire Sprinkler Association in Patterson, NY (near Danbury, CT) reporting to the Vice President of Engineering performing technical services to the members of the association. Such services include researching codes and standards to respond to member's requests for assistance, helping to develop seminars for the members at all levels from beginner to advanced, helping to organize research on various aspects of sprinkler system performance, and preparing written materials on the installation of water-based fire protection systems. Specific areas of concentration for this position are:

Membership Services

- Serve as a resource to the Expert of the Day (EOD)
- Assist in updating the information on the Engineering Department web page

Seminars

- Assist in upgrading Technician Training Seminars
- Assist in upgrading the Certificate Program for Fire Sprinkler Technicians (CPFST)
- Assist in grading homework and communicating with students enrolled in the CPFST
- Assist in development of On-Line Seminars

Publications

- Assist in writing and updating publications for sale through the NFSA Resource Center
- Write articles for SQ magazine and/or industry newsletters as needed
- Keep the Subject Index of Technical Articles up to date

Other

- Perform other duties for the good of the sprinkler industry as assigned
