

National Fire Sprinkler Association

Job Description – Manager of Installation Standards

To work within the Engineering Department of the National Fire Sprinkler Association in Patterson, NY (near Danbury, CT) reporting to the Vice President of Engineering performing technical services to the members of the association. Such services include representation on NFPA technical committees, providing interpretations of codes and standards, developing, teaching and updating seminars delivered to the members at all levels from beginner to advanced, organizing and disseminating research on various aspects of sprinkler system performance, and preparing written materials on the installation of water-based fire protection systems. Specific areas of concentration for this position are:

NFPA Committees

- Actively participate on the Water Spray Systems Committee (NFPA 15)
- Actively participate on the Water Mist Committee (NFPA 750)
- Actively participate on the Merchant Vessels Committee (NFPA 301)

Membership Services

- Serve a minimum of 75 days per year as Expert of the Day (EOD) Responding to requests for information via telephone, fax and e-mail
- Actively update the information on the Engineering Department web page
- Serve as Assistant Secretary of the NFSA Engineering and Standards Committee

Seminars

- Assist in upgrading and teaching Technician Training Seminars
- Assist in upgrading and teaching the Certificate Program for Fire Sprinkler Technicians (CPFST)
- Assist in grading homework and communicating with students enrolled in the CPFST
- Assist in development and teaching of On-Line Seminars

Publications

- Assist in writing and updating publications for sale through the NFSA Resource Center
- Write articles for SQ magazine as needed
- Keep the Subject Index of Technical Articles up to date

Other

- Perform other duties for the good of the sprinkler industry as assigned
