Rhino FPE is a rapidly growing fire-protection consulting firm based in Reston, Virginia. Since fire protection is our specialty, we provide a wide range of fire protection that isn’t always found in multi-disciplinary firms and focus on the projects that interest us – egress, foam systems, gaseous suppression, fire alarm, and sprinkler design.

Our engineers work on a broad range of projects that covers many facets of fire protection engineering. We provide services across a number of sectors, including military, industrial, government, university, libraries, museums, and stadiums for clients like the US Department of State, DoD, GSA, and the Smithsonian Institute.

The qualified candidate for junior position shall be graduated from a Fire Protection Engineering accredited program. EIT license (ability to obtain), CAD proficiency and experience in fire protection systems design preferred. Revit experience desired. We are a growing office and looking for junior engineers with experience in fire alarm and sprinkler systems design and code analysis.

Call us today and see how Rhino FPE can help you learn and grow as an engineer.
